# Comanche Familiarization

This document contains information that is proprietary to the Boeing Sikorsky First Team and shall not be used for manufacture, disclosed, or reproduced in whole or in part without the expressed written consent of the Boeing Sikorsky First Team. This document should not, for any purpose, be used for maintenance, troubleshooting, pre-flight or flight operations. This restriction does not limit the right to use information obtained from another source.

The intended use for this material is familiarization training for contractor mechanic, Army early users, and government Comanche program administrators. The purpose of mechanic training is to provide maintenance and test personnel with an introduction to the unique qualities of the Comanche air vehicle and support equipment. This information is generally constrained to the prototype configurations except where future capabilities are relevant to a description of the present design. Test instrumentation gear is not part of the curriculum. While training presentations will include lessons learned from PSTB and A/C #1 operations, the student handout is not intended to provide maintenance instructions or procedures. The text and illustrations are meant to provide a description of system operation and function only.
